

Requests

Data transfer over the internet

```
import requests

url = "https://httpbin.org/ip"
response = requests.get(url)

if response.status_code == 200:
    print(response.text)
else:
    print("Oh no something went wrong!")
```

```
import requests
```

Include the library in our code

```
url = "https://httpbin.org/ip"
```

Define the url we want to connect to

```
response = requests.get(url)
```

Use the 'get' function to download

```
if response.status_code == 200:
```

Check if the connection succeeded

```
    print(response.text)
```

Use the '.text' attribute to access what was downloaded

```
else:
```

```
    print("Oh no something went wrong!")
```
